Vendor portal

Database Schema → Feature Mapping Document

Architecture: MySQL + FastAPI + SQLAlchemy (MVC) | Application Type: B2B Vendorr Portal

Overview :

This document maps the vendor portal features to the database tables that support each functionality. The schema organizes vendor operations such as manufacturer management, product catalog maintenance, order processing, and vendor–manufacturer collaboration. Each feature module corresponds to one or more tables that store and manage the related data.

Feature summary :

Features	Tables	Notes
Vendor Account Management	1	Stores vendor details such as business type, email, and contact information
Manufacturer Management	2	Stores manufacturer profile and location details
Vendor-Manufacturer Approval	1	Handles approval workflow between manufacturers and vendors
Product Management	1	Vendors manage product catalog, pricing, stock, and descriptions
Order Management	2	Tracks orders placed between manufacturers and vendors
Order Status Tracking	1	Maintains predefined order status values

Detailed Feature-to-Table Mappings:

1. Vendor Account Management

Manages vendor registration, login credentials, and business details.

Table Name	Role in this Feature
vendors	Stores vendor business details, contact information, authentication credentials, and account status

2. Manufacturer Mnagement

Manages manufacturer company details and location information

Table Name	Role in this Feature
manufacturers	**Manufacturer company information such as registration number, GST, and industry type**
manufacturer_locations	**Stores physical location and contact details of manufacturers**

3. Vendor–Manufacturer Approval

Controls the onboarding and approval relationship between manufacturers and vendors

Table Name	Role in this Feature
manufacturer_vendor_approvals	Tracks vendor approval status by manufacturers

4. Product Management

Allows vendors to manage their product catalog including pricing, stock levels, and descriptions

Table Name	Role in this Feature
products	Product information such as SKU, price, discount, tax, stock quantity, and product details

5. Order Management

Manages customer payment methods, manufacturer-issued invoices, and payment records.

Table Name	Role in this Feature
orders	Order header containing manufacturer ID, vendor ID, and total order value
order_items	Individual product items included in each order

6. Order Status Tracking

Tracks the lifecycle of an order

Table Name	Role in this Feature
order_status_master	Defines order statuses such as pending, confirmed, shipped, delivered

Master Table Index

Complete list of all 8 tables in the schema, their owning feature module, and the primary entity or concern they address.

#	Table Name	Feature Module	Purpose
1	**vendors**	Vendor Account Management	Store vendor business details, contact information, authentication credentials, and account status
2	**manufacturers**	Manufacturer Management	Manufacturer company information such as registration number, GST, and industry type
3	**manufacturer_locations**	Manufacturer Management	Stores physical location and contact details of manufacturers
4	**manufacturer_vendor_approvals**	Vendor- Manufacturer Approval	Tracking vendor approval status
5	**products**	Product Management	Manufacturer compliance certificates
6	**orders**	Order Management	Order header containing manufacturer ID, vendor ID, and total order value
7	**order_items**	Order Management	Individual product items included in each order
8	**order_status_master**	Order Status Management	Tracking the status of each order
