SHRAVYA

Udupi, Karnataka
+91 8431932480 shravyay20@gmail.com Shravya y shravya-y

I am seeking an organization that provides opportunities to develop my skills and knowledge while contributing to its objectives and overall growth. I have interest in Artificial Intelligence and Machine Learning and have worked on projects related to emotion detection and predictive modeling.

Education

Shri Madhwa Vadiraja Institute of Technology and Management (VTU) **Sep 2022 - July 2026**
Bachelor of Engineering in Artificial Intelligence and Machine Learning (CGPA of **8.53**) *Karnataka, India*

Projects

Human Emotion Detection Using Machine Learning | | Python, Tensor Flow/Keras, Numpy, Pandas |

- Designed and developed a **Convolutional Neural Network (CNN)** model to automatically detect and classify human emotions from facial expressions.
- Collected and preprocessed image data using **OpenCV** techniques to ensure high-quality input for training.
- Built a CNN-based model in **TensorFlow/Keras** and achieved **85%+ accuracy** across five key emotion categories – happy, sad, angry, surprised, and neutral.
- Tried out different model designs and adjusted settings like learning rate and layers to make the model more accurate and less likely to overfit.
- Got real hands-on practice with deep learning, image preprocessing, and testing models, which gave me a good taste of how AI projects work in real life.

Loan Prediction using Machine Learning | Python, Scikit-learn, Pandas, Numpy, Matplotlib |

- Worked on a project to predict whether a loan application would get approved based on applicant details like income, education, and loan amount.
- Collected and cleaned the dataset using **Pandas**, handled missing values, and converted categorical data into numerical form so the model could understand it better.
- Implemented a **Logistic Regression model** with Scikit-learn and checked its performance using accuracy scores and a confusion matrix.
- Achieved around **75% accuracy** on the test data, which gave me practical exposure to how data preprocessing and model evaluation impact results.
- This project helped me build confidence in applying machine learning workflows—from exploring the dataset to training, testing, and analyzing predictions.

Technical Skills

Languages: Java, Python, C, HTML, CSS.

Databases: MySQL, MongoDB.

Data Structures and Algorithms (Intermediate).

Development Tools & Frameworks: VS Code, GitHub, Power BI, Flutter.

Achievements

- Solved **200+** problems in Python on **CodeChef.**
- Built and hosted SQL-based projects using MySQL Workbench and GitHub.

Certifications & Online Courses

- Python for Data Science — **NPTEL SWAYAM** (IIT Madras).
  Elite | Score: **60%** | Completed: April 2025.
- Java Programming - Online Internship at **Internpe.**
- Microsoft AI Learning Challenge – Innovation 2025 | Microsoft Learn | Completed: September 2025

Activities & Interests

- Practicing competitive programming on CodeChef to enhance problem-solving skills.
- Learning about Artificial Intelligence and its applications through online courses.
- Interested in reading about new technologies and their real world impact.
